# Smart Home Ambient Intelligence: voice assistants

a new limit for our freedom

Stefano Brandoli

Politecnico di Milano Computer Ethics 2017/2018

December 12, 2017

#### Presentation Outline

## Smart Home Ambient Intelligence: voice assistants a new limit for our freedom

- 1 Introduction
  - Technological Mediation
  - Definitions
- 2 Case Study: Google Home Google Assistant Actions
  - Applied concepts of Technological Mediation limiting our freedom
  - Ethical concerns arising from loss of freedom
- 3 Possible Remedies

## Technological Mediation

While fulfilling their function, technologies do much more: they give shape to what we do and how we experience the world. And in doing so they contribute actively to the ways we live our lives (Verbeek 2011, 12)

- Technologies are not neutral intermediaries
- Technologies play an actively mediating role
- Artifacts are bearers of morality (Latour 1992)
- Morality is a matter of human-technology associations (Verbeek 2011)
- Two perspectives of technological mediation:
  - Perception
  - Action: I will focus on human freedom

#### Definitions I

### Ambient Intelligence

Ambient Intelligence is an approach that combines two major technologies: Ubiquitous Computing and Intelligent User Interfaces (IUIs) (Brey 2005, 158)

#### Voice Assistant

A voice assistant is a digital assistant that uses voice recognition, natural language processing and speech synthesis to provide aid to users through phones and voice recognition applications (WhatIs 2017)

#### Definitions II

#### Freedom

Two forms (Brey 2005, 2006):

- ▶ Negative Freedom:
  - act without obstruction or interference by others
  - absence of limits and external constraints

example: artifact refusing to perform an action

- ▶ Positive Freedom (Human Autonomy): I will focus on this
  - mastery over your own life
  - think freely, make your own decisions to act

## Case Study: Google Home - Google Assistant Actions

## Case Study: Google Home - Google Assistant Actions

#### **Examples**

- ► Order a pizza
- Fix appointment with a plumber
- ► Many others . . .

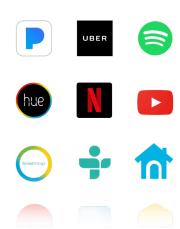

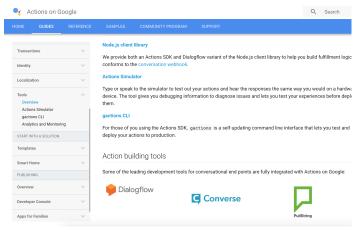

Figure: Google Assistant Actions

## Google Assistant Actions

#### Starting from the **Actions on Google documentation** I will show:

- 1. Applied concepts of Technological Mediation limiting our freedom
- 2. Ethical concerns arising from loss of freedom

## Applied concepts of Technological Mediation

limiting our freedom

## Script: make your own decisions

### Script

A **script** is a prescription of how to act when using the artifact (Verbeek 2011)

Assistant Actions can be built in two ways (Google 2017):

#### 1. With templates

- build apps without writing a single line of code
- build apps quickly without worrying about designing conversations
- ► Google decides which interactions are good and what aren't

#### 2. Without templates

- Dialogflow
  - machine learning
  - natural language understanding
  - extract parameters (data) from the user vocal input
- developers can decide the whole conversational interaction

## Script: make your own decisions

Figure: Actions On Google Console

## Invitation/Inhibition: make your own decisions

## Invitation/Inhibition

The scripts of artifacts suggest specific actions and discourage others (Verbeek 2011, 21)

#### For the Google Assistant Actions:

- Developers while creating the application logic enable some actions and disable some others
- The conversational interaction doesn't go on if the user hasn't answered with all the required parameters

## Invitation/Inhibition: make your own decisions

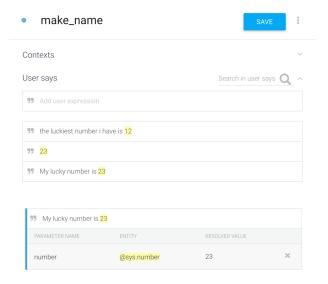

Figure: DialogFlow interactions

## Behaviour Steering: think freely I

## Suggestion Chips

Use suggestion chips to hint at responses to continue or pivot the conversation (Google 2017)

- This happens in vocal interactions
- Can be more easily visualized on mobile phones

## Behaviour Steering: think freely II

Smart objects could become intermediaries between businesses and consumers, using their intelligence to persuade customers to buy products . . . Such influence could already be exerted at the design stage . . . (Brey 2005, 163)

#### Advertisements

- Google Assistant advertised "Beauty and the Beast" film, but Google claimed it was not an ad (AndroidPolice 2017)
- ► In future Google Assistant will include ads
  - make money by promoting e-commerce from partners (Recode 2017)
  - forecasted ad-spend of 19 billions globally by 2022 (Juniper 2017)
  - what if developers shape mediations based on ads analytics?

## Behaviour Steering: think freely III

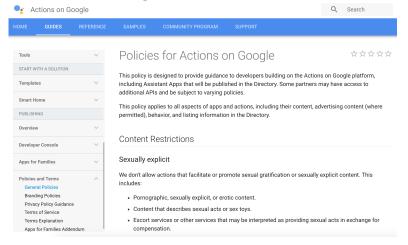

Agent-based dialogue systems can be included in IUI's to monitor users and make assumptions about their intentions and the task they are trying to perform (Brey 2005, 159)

#### Implicit Invocation

The Assistant opts to invoke an app because it can fulfill the user's intent, without users calling it by name (Google 2017)

example: "Hey Google, book an appointment to fix my bike"

## What about Technological Mediation?

**Google Actions Policies** are designed towards: privacy, content, branding . . .

following the Guidance For Conversation Design is enough?

Ethical concerns arising from loss of freedom

## Fear of Technocracy

- Experts will shape our mediations
  - Antidemocratic
    - ▶ How to make it more democratic?
  - Unforeseen mediations
    - Not humans but technologies are in control (Verbeek 2011, 102)
- Opposite problem: people without enough technical background may design Google Assistant Actions and publish them
  - today are very limited mediations
  - what about the future?

#### Moral Laziness

- Immorality or amorality
- People may delegate all moral decisions to machines (Verbeek 2011, 134)
- Commodification of morality (Borgmann 1984)
  - Things that used to require effort to acquire have become available with the push of a button
  - today we don't even need buttons . . .
  - voice assistants are a new step in this process of commodification?

## Moral Responsibility

- ▶ Designing is "materializing morality" (Verbeek 2011, 101)
- ► To what extent can designers be held morally responsible for undesirable forms of mediation?
  - The responsibility should not be left to designers alone (Verbeek 2011)
  - For the Google Actions Policies developers are legally responsible for the Actions they create
    - What about their moral responsibility?

Possible Remedies

#### Possible Remedies

- ► Make the design process more democratic (Verbeek 2011)
  - Anticipate Mediation
  - Assess Mediation
  - Design Mediation
- Teach voice assistants' developers to think about Technological Mediation
- Re-think the moral responsibility of designers
